

Annual Security Audit Report 2026

Date: September 2, 2026

Lead Auditor: Elena Rostova (CISO)

Executive Summary

The annual security audit was conducted by the internal Red Team across all primary infrastructure. Overall compliance is at 94%. However, one critical vulnerability was discovered in the legacy authentication module.

Finding 1: Legacy Auth Module Vulnerability (CVSS 9.8)

The v1.0 authentication service is susceptible to a token bypass attack. An attacker could theoretically forge session cookies for administrative accounts.

Remediation Decision

Given the severity of the vulnerability, Elena Rostova mandated an immediate deprecation timeline. The legacy auth module will be completely deprecated by September 15, 2026. All clients will be forced to migrate to the OAuth2.0 standard. This will require 48 hours of emergency maintenance downtime this weekend.
